The specimens labelled as *Cassidulina crassa* in Plate 1 (fig. 6 (MPZ-2023/391) and fig. 7 (MPZ-2023/392)) were incorrectly labelled prior to file submission. These specimens exhibit neither the features of the species as described by d’Orbigny nor the enrolled plane of biseriality planispirally that is observed in the genus *Cassidulina*. The figured specimens are tentatively identified as *Pseudoparrella*. They are somewhat more inflated and have fewer chambers than other specimens identified as *Pseudoparrella* sp. at Site 1053.
